

Genome Instability, Evolution and Human Diseases

St. Petersburg, Russia, June 14-17, 2013

Alphabetical List of Poster Presenters

Name	Organization	Poster Title	Poster #
Elizaveta Ageeva	Khakas State University of N.F. Katanov	Ethno-population features of CYP2C19 +681G>A at patients with ulcer disease at the aboriginal and non-aboriginal inhabitants of Khakassia	1
Amir Aharoni	Ben-Gurion University	Tight regulation of PCNA-mediated DNA replication in <i>S. cerevisiae</i>	2
Daniil Andreychuk	Umeå University	Effect of imbalanced dNTP pools on mitochondrial DNA stability	3
Yulia Andreychuk	Umeå University	Regulation of Ixr1 transcription factor by DNA damage	4
Nigar Babayeva	Eppley Institute for Research in Cancer and Allied Diseases	Crystallization of B-family human DNA polymerases	5
Olesya Belopolskaya	Vavilov Institute of General Genetics RAS	DNA polymorphism in children with malignant brain tumors	6
Ekaterina Belousova	Institute of Chemical Biology and Fundamental Medicine RAS	Multiple damaged sites repair: participation of BER and TLS proteins	7
Shay Ben-Aroya	Bar-Ilan University	Characterization of <i>CIA2</i> , a conserved gene with a role in maintaining the stability of chromosomes	8
Luis Blanco	Center of Molecular Biology Severo Ochoa	PrimPol, an archaic DNA primase/DNA polymerase in human cells	9
Nicholas Burgis	Eastern Washington University	Removal of noncanonical purines from nucleoside triphosphate pools	10
Andrei Chabes	Umeå University	dNTPs and maintenance of genome stability	11
Andrei Chernenkov	Petersburg Nuclear Physics Institute	The interactions between the yeast <i>Saccharomyces cerevisiae</i> Hsm3 protein and chromatin remodeling factors	12
Zoulfia Darieva	Manchester University	Role of Pkc1 in coordinating chromatin modifications in response to DNA damage.	13
Milena Denkiewicz	Institute of Biochemistry and Biophysics PAS	GIN5 complex – a new player involved in the maintenance of genomic stability in <i>S. cerevisiae</i>	14

Rao Desirazu	Indian Institute of Science	Interplay of UvrD Helicase with MutL and MutS in <i>Haemophilus influenzae</i> , and its modulation by ATP	15
Dmitry Fedorov	Petersburg Nuclear Physics Institute	Characterization of yeast <i>hsm6</i> mutants	16
Rais Ganai	Umeå University	Enzymatic properties of yeast DNA polymerase epsilon	17
Roza Goncharova	Institute of Genetics and Cytology, NAS of Belarus	Genome integrity and diagnostics of genome instability in human lymphocytes in the risk groups	18
Ewa Grabowska	Institute of Biochemistry and Biophysics PAS	Mutation in central part of Psf1p subunit of GINS complex has impact on DNA replication fidelity	19
Peter Hällman	Umeå University	Studies of the Pol ε accessory subunits	20
Artem Ignatov	Institute of Molecular Genetics RAS	Single amino acids substitutions in the fingers domain increase the fidelity of human DNA polymerase iota	21
Faina Ingel	A. N. Sysin Research Institute for Human Ecology and Environmental Hygiene	Modification of children's genomic instability is realized through imbalance of autonomous system, induced by factors of their microsocial environment	22
Ruslan Ivanov	Institute of Biology, Ufa Science Center RAS	Genetic variation at reorganization proteome of cell nuclei of plants in the environment	23
Erik Johansson	Umeå University	Structural and functional studies of DNA polymerase epsilon	24
Piotr Jonczyk	Institute of Biochemistry and Biophysics PAS	Control of the <i>E. coli</i> error-prone SOS response by intracellular dNTP pools	25
Viachaslau Kipen	International Sakharov Environmental University	FREQUENCY OF 1100delc IN GENE CHEK2 IN POPULATION OF MAMMARY GLAND CANCER PATIENTS FROM CHERNOBYL AFFECTED AREA (BELARUS)	26
Olga Kochenova	Eppley Institute for Research in Cancer and Allied Diseases	DNA polymerase ζ synthesizes long stretches of DNA during lesion bypass <i>in vivo</i>	27
Natalia Koltovaya	Joint Institute for Nuclear Research	SANS and HRTEM study of iron and tellurite nanoparticles in mitochondria/CDK1 and mitochondrial DNA stability in budding yeast	28
Martin Kupiec	Tel Aviv University	Effect of nuclear architecture on the efficiency of double-strand break repair	29

Andrei Kuzminov	University of Illinois at Urbana-Champaign	Ultraviolet-induced chromosomal fragmentation: Pathways, mechanisms, and contribution to lethality	30
Artem Lada	Eppley Institute for Research in Cancer and Allied Diseases	Genome-wide kataegis induced by AID/APOBEC deaminase in yeast revealed by next-generation sequencing	31
Igor Lebedev	Institute of Medical Genetics RAS	Multilocus methylation defects of embryo imprintome in human miscarriages	32
Alena Makarova	Washington University School of Medicine	DNA polymerase ζ - and Rev1-mediated mutagenesis in yeast	33
Karolina Makiela-Dzbenska	Institution of Biochemistry and Biophysics PAS	Contribution of Dpb2p, the non-catalytic subunit of DNA Polymerase epsilon, to the fidelity of DNA replication in <i>Saccharomyces cerevisiae</i>	34
Viacheslav Mikhailov	Institute of Cytology RAS	Tumors of GFP-expressed C57BL/6 mice	35
Nataliya Miropolskaya	Institute of Molecular Genetics RAS	Single amino acids substitutions in the fingers domain increase the fidelity of human DNA polymerase iota	21
Yuriy Nikonorov	Institute of Biochemistry and Genetics, Ufa Science Center RAS	Whether the role of intensive activity of transposones is always negative?	36
Haruo Ohmori	Gakushuin University	Interactions between Rev7/Mad2B or Mad2 and Rev3 in various organisms	37
Ulf Persson	Umeå University	The C-terminus of Dpb2 is required for interaction with Pol2 and for cell viability	38
Pavel Pestryakov	Institute of Chemical Biology and Fundamental Medicine RAS	Interaction of multifunctional protein YB-1 with AP-sites and its influence on AP endonuclease 1, tyrosyl-DNA phosphodiesterase 1 and DNA glycosylase NEIL1	39
Helmut Pospiech	University of Oulu & Leibniz Institute for Age Research - Fritz Lipmann Institute	Distinctive activities of human replicative DNA polymerases during S phase – DNA polymerase ϵ , but not DNA polymerases α/δ are associated with lamins throughout S phase	40
Alexandr Rubel	St. Petersburg State University	Analysis of interaction of mammalian amyloid in yeast based system	41
Alsu Saifitdinova	St. Petersburg State University	Changes in transcribed non-coding regions of the genome as a precondition for evolution	42
Sushma Sharma	Umeå University	Regulation of dNTP metabolism in SOD1 mutants	43

Anna Shiriaeva	St. Petersburg State University	IMPACT OF HOMOLOGOUS RECOMBINATION INTO GENOME STABILITY ESTIMATED BY THE “ α -TEST” IN YEAST <i>SACCHAROMYCES CEREVISIAE</i>	44
Lilia Shulenina	Burnazian Federal Medical Center of the Federal Medical Biological Agency	The content of miRNA and the development of breast tumors in irradiated rats	45
Hollie Siebler	Eppley Institute for Research in Cancer and Allied Diseases	Critical Role of C-Terminal Domain of DNA Polymerase Zeta (ζ) in Induced Mutagenesis	46
Nikolay Skryabin	Institute of Medical Genetics RAS	Dynamics of epigenetic and chromosomal instability in breast cancer	47
Elena Stepchenkova	St. Petersburg State University	Role of purine nucleotide biosynthesis pathway in control of mutagenesis level in yeast	48
Vadim Vasilyev	Institute of Experimental Medicine	Modeling mitochondrial diseases: evidence of mtDNA paternal inheritance in several sequential generations	49
Anna Zawada	Institute of Biochemistry and Biophysics PAS	Influence of two human POLE2 counterparts on different DPB2 yeast phenotypes	50
Liubov Zelena	Zabolotny Institute of Microbiology and Virology, NAS of Ukraine	<i>Saccharomyces cerevisiae</i> genome instability under different stress factors	51
Galina Zhouravleva	St. Petersburg State University	Chromosomes instability in the yeast strains mutant for the essential gene <i>SUP45</i>	52
Anna Zhuk	St. Petersburg State University	Studying the initial stages of mutagenesis: phenotypic expression of primary DNA lesions and their further processing using the α -test	53
Andrei Zinovyev	INSERM	Synthetic lethality within Homologous Recombination DNA repair pathway	54
